INTRODUCTION

SEASON CLOSE

Before taking stock of these intense months, we want to start by thanking all our sponsors and collaborators. Thank you for your trust; you are the engine that makes it possible for this team to continue advancing.

The season that we have closed will be recorded forever in our memory. It has been historic: for the first time, we have put an electric car on track in a Formula Student test. A major challenge that has led us to design a 20 kilos car lighter, much more compact and with a deeply optimized packaging that has improved accessibility for our mechanics.

One of the most special moments we experienced last July 10 with the resounding success of the roll-out of the EM-06 at EUSS. Seeing the fruit of so many hours of joint work materialized on such a special day gave us the perfect impulse to face summer appointments with guarantees in Formula Student Spain and France.

We have learned, competed and laid solid foundations that make us look to the future with great enthusiasm.

Below we explain in detail how it has gone to the competitions and we advance the roadmap that we already have ready for the next course.

The EUSS Motorsport team

FORMULA STUDENT SPAIN

From 1st to 7th August we live an unforgettable week at the Circuit of Barcelona-Catalonia competing in Formula Student Spain (FSS). Going home has been a turning point for the whole team.

During the first days we exceeded the initial inspections and defended the statistical tests with great results: 45.8 points in the Business Plan Presentation, 49 in Engineering Design and 60.8 in Cost and Manufacturing. In addition, our driver Lluís Marquès won the award for the Best SimRacing Pilot.

The great moment came on August 6 when, 5 years after the transition to electric vehicles, we achieved a historic goal: to overcome the 6 complete technical scrutinies. This success allowed us to jump to the track on August 7 to play the autocross and the Endurance. Despite not being able to finish the dynamic careers, we take away valuable information and key learning to continue improving.

Thanks to the organization of the FSS, our sponsors and families to make it possible. We are a young team that keeps growing and we already have our eyes on the next challenges.

FORMULA STUDENT FRANCE

At the end of August we headed for France to dispute the Formula Student France (FSF) with our EM-06. An experience of maximum demand that has given us great lessons and has put to the test the ability to overcome the whole team.

The first few days we started on a very good footing: we exceeded pre-inspection, we got the first sticker of the battery and we advanced at a good pace in the scrutineering of mechanics. In addition, we defended the first static tests of Business Plan and Engineering Design.

However, an electrical breakdown made us lose two days of work and, due to lack of time, we could not go out on track in the dynamic tests. Despite the hard blow, the team did not give up: we worked tirelessly until we solved the problem completely before closing the competition.

We mark the end point of the season having demonstrated our determination, with the incident resolved and with more enthusiasm and motivation than ever to continue improving in the face of the next challenges.

THE NEW SEASON

Looking ahead to the next season, we leave behind the learning of a historic season to face a new cycle with a lot of enthusiasm and energy. We will compete with our new EM-X, a very special name with which we will celebrate that our university is 10 years old, and we mark a very clear roadmap to continue growing on the asphalt: reduce the weight of the car below 250 kg, consolidate a minimum of 200 points in the static tests, complete 200 km of previous tests to get everything ready and, above all, score firmly in the dynamic tests.

To make this possible, the team has reorganized by betting on standardization of processes, the incorporation of key talent and a much more refined design. Focused on minimizing past errors, this year's technical project includes important improvements in electronics, wiring and cooling, as well as the development of high-level components such as our new Monobloc R&D project already thinking about the FSG 2027 Rules and the transition to advanced simulation tools such as STAR CCM+.

Finally, at the communication level, we will continue to bring you all our evolution through an updated website, collaborations with other teams and a much more careful presence in networks, where the car and our main allies will be the main characters. Thank you for being part of this dream; this is just continuing.

THE ENGINE THAT MOVES US IS YOU

At EUSS Motorsport we know that milestones on the track are important, but what really defines us is the path: the learning hours of our first year with an electric car, resilience after the intense summer of this year in competitions in Spain and France, and the incredible network of collaborators and sponsors that make this project viable year after year. Without your support, this dream wouldn't roll.

Do you want to live the process with us? We encourage you to follow our day to day more closely through our networks (where the car and our key allies will be the main characters of the feed). Where the data of this newsletter does not arrive, you will find the reality of our workshop, our successes and, also, our learning.

Thank you for sharing this passion with us and for making this historic season possible. See you at the next bend of the road, getting closer and closer to the start line!

The EUSS Motorsport team.
